1. Following is an attempted reply to paragraph 4.c. of reference: Information from a area division source partially confirms 's reported desire to move KUBARK and elements from . However, there is an additional rumor that considerable pressure is being exerted by to keep those KUBARK elements at as support in order to prevent a cutback of facilities at . proposed move involves approximately 65 personnel and some 45 personnel - most of whom are probably equipped with dependents. Until very recently, Project AQUATONE planning has been directed toward maintaining its capability at as long as political considerations permit. However, by reference B you have been advised that present, tentative planning calls for redeployment of on or about 31 January 1958. Consequently, the following immediate possibilities exist:
